# STUDENT REPORT

### DETAILS

 $^{'}$ Name

BALAJI NAGA V N

## FXPFRIMENT

Title

NUMBER OF COMBINATIONS LEADING TO A PRODUC

### Description

**Problem Statement:** 

You are given an array arr and a product m. Your task is to find the number of possible unique triplets whose product of elements is m.

Input Format:

- The first line contains the integer, n
- The second line contains space seperated integers of the array, arr
- The third line contains the product m.

The input will be read from the STDIN by the candidate

**Output Format:** 

The output consists of a single integer, i.e. the count of unique triplets having product m.

The output will be matched to the candidate's output printed on the STDOUT

Example:

Input:

7

5 3 20 10 1 4 2

60

Output:

3

3BR2?

Explanation:

Product m:60

Possible triplets for product m: (5,4,3),(20,3,1), (10,3,2)

The count of unique triplets is 3.

38R273

## **Roll Number**

Source Code:

```
def count_triplets(arr, n, m):
           unique_triplets = set()
           for i in range(n):
               for j in range(i + 1, n):
                   for k in range(j + 1, n):
                       if arr[i] * arr[j] * arr[k] == m:
522
                           triplet = tuple(sorted([arr[i], ar
       r[j], arr[k]]))
                           unique_triplets.add(triplet)
           return len(unique_triplets)
3884
       # Input Reading
       n = int(input())
       arr = list(map(int, input().split()))
       m = int(input())
       result = count_triplets(arr, n, m)
       print(result)
```
